DATA SUBMISSION UPDATE – 26 April 2018

To submit your country data, please use the new MMM app where possible.

-*The app can be used both with **and without** internet connection.*
-The app is available for *mobile phones* (android and apple), *tablets* (android and apple) and *laptop* and *desktop* computers (Windows and apple).
-There is also a web version of the app (for those who have internet connection at the screening site).
-You will need to provide your screening site volunteers with the access code to register as an app user, you will need the access code (available from your MMM country leader).

-If you are not able to input data directly onto the app, we recommend that you use the Excel template. (Further details below.)

-**IMPORTANT**: Use of the "scan and capture" function on the app is to be used as a **back-up option only**. Please see details below.

We have provided paper forms to capture hand-written data and there is a function on the app to scan these forms.
However, please note: scanning on the app is _not perfect_. We recommend using this as a **_back-up option only_**.
Before submission, every form scanned will require checking and amending.

We are continuing to improve the scanning capabilities. However, if you are planning to use the "scan and capture" feature, please:
1) Test the feature in advance to ensure it meets your requirements and expectations. If it doesn't, you may need to consider the other options.
2) If you do use it, make sure you scan and submit forms as you go along – don't leave hundreds of forms to submit until the last day of May!
